GENERAL INSTRUCTIONS FOR CT SCAN

- If a contrast material is used for the scan,
 - Fasting for 4 to 6 hours before the procedure is required.
 - Recent serum creatinine blood test report (done within last 15 days) should be available.
- Tell the technician about existing medical conditions such as kidney problems and about the medications being taken.
- **Inform the doctor if pregnant.**
- A contrast material is given to obtain better images. It may be given as a drink, injected, or administered through the rectum as an enema.
- Remove jewelry or other metal objects, glasses etc, and if required change to a hospital gown.
- The technician will ask you to lie on a flatbed that enters the CT scanner. The CT gantry rotates around and captures several images.
- The technician may also ask to breathe in, out or hold the breath at certain times during the procedure. Listen for additional instructions during the scan.
- It is important to remain still during the procedure.
- The CT scan involves exposure to radiation.
- Some people may show an allergic reaction to the contrast dye used. **Tell the technician if you are allergic to the contrast dye.**
- Drink plenty of water after the scan.
