INFORMED CONSENT FOR GASTROINTESTINAL ENDOSCOPY (GI ENDOSCOPY)

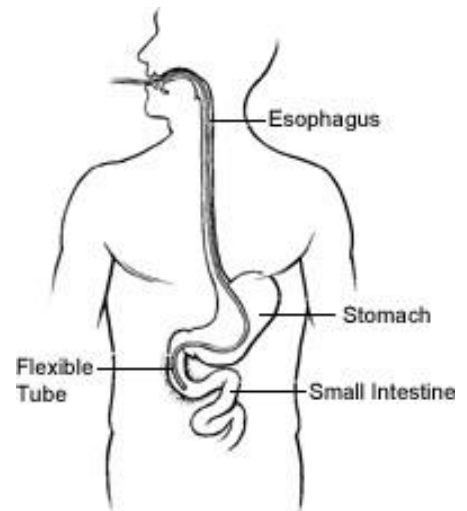

PART A

1. Full Name of the procedure:

Please tick as appropriate			
UPPER GASTRO INTESTINAL ENDOSCOPY	Yes	No	
Additional procedure(s):			
☐ Dilatation			
☐ Biopsy			
☐ EUS (Endoscopic ultrasound)			
☐ EVL (Endoscopic variceal ligation)			
☐ Polypectomy			
☐ Sclerotherapy			
☐ Hemostasis (Hem spray /Clips)			

Full name of the procedure _____

2. Details of procedure: In UPPER GASTROINTESTINAL ENDOSCOPY procedure, the oesophagus (gullet or foodpipe), stomach, and the first part of the small intestine (duodenum) are examined using a flexible tube-like instrument (endoscope) with a mounted camera. The endoscope does not interfere with the patient's breathing. Under sedation and after a local anaesthetic is sprayed onto the back of the throat, the endoscope is passed through the mouth into the oesophagus. As the instrument is passed down the oesophagus, the doctor can see the inner lining clearly. Some air is blown into the stomach to open it up to allow the doctor to inspect the stomach before finally passing the endoscope into the duodenum.

During a colonoscopy, the doctor inserts a flexible tube-like instrument (colonoscope) with a mounted camera into the rectum to check for abnormalities in the entire colon (Large intestine and Rectum). The scope also blows air into the colon, which expands the colon and helps the doctor see more clearly. At any point, small pieces of tissue (biopsies) may be taken for more detailed examination. If clinically indicated, a minor procedure may be carried out. At the end of the procedure, air is sucked out and the instrument removed.

3. Intended benefits:

To assess the condition of upper/ lower gastrointestinal tract (oesophagus, stomach and duodenum-UGI scopy, large intestine and terminal ileum in case of colonoscopy), If required, to take a piece of tissue (biopsy) for further evaluation, In case an additional procedure is being carried out, the intended benefits are:

4. Possible risks and complications:

Allergic reactions or side effects of medicines used for the procedure (like sedatives), Though rare, perforation (tear) of the intestine may occur and this may require surgical repair, Small risk of damage to dental crowns or bridgework, Bloating sensation, sore throat and difficulty in swallowing may persist for some time after the procedure. In case of colonoscopy though rare –bleeding, pain, perforation. Less likely to happen vasovagal attack, secondary infection

5. Possible alternatives:

Capsule endoscopy ,Other diagnostic investigations like CT Scan etc

Alternatives to the additional procedure (if applicable):

6. Post procedure course:

- After the procedure, patients are asked to stay on in the procedure area for up to 1 hour. Patients are asked not to eat or drink anything until the swallowing reflex is normal (usually 30 to 60 minutes). If a sedative has been administered, patients should not drive, operate machinery or make important decisions.

PART B

I, _____, ☐ the Patient, or ☐ (representative of patient _____), (please tick the correct option above)

have read and been explained in a language that which I fully understand and understood the information provided about _____ (Diagnosis). I consent Dr. _____ (Name of the Doctor performing the procedure) to do (Brief description of operation/procedure) _____ in Part A of this consent form.

I am now aware of the intended benefits, possible risks & complications, and available alternatives to the said operation/procedure. I am also aware that results of any operation/procedure can vary from patient to patient; and I declare that no guarantees have been made to me regarding success of this operation/procedure. I am aware that while majority of patients have an uneventful operation and recovery, few cases may be associated with complications. I am aware of the common risks and complications associated with this operation/procedure as listed in Part A, and understand that it is not possible to list all possible risks and complications of any operation/procedure.

I also understand that sometimes a planned operation/procedure may need to be postponed or cancelled if patient's clinical condition worsens or due to any unforeseen technical reason. I am also aware that I can withdraw my consent at any point of time at my own risk and consequence, by submitting the withdrawal in writing.

I understand that if medical exigencies demand, further or alternative operative/procedural measures may need to be carried out, and in such case there may be difference in the planned and actual operation/procedure. I am aware that I may require administration of blood and/or blood products during or after the operation/procedure as found necessary by the doctor (for which a separate consent shall be obtained).

I am now also aware that during the course of this operation/procedure the doctor will be assisted by medical and paramedical team, and that the doctor may seek consultation/assistance from relevant specialists if the need arises.

I agree to observing, photography (still/video/televising) of the procedure (including relevant portions of my body) including my diagnosis/reports (pathology, radiology, etc), for academic/ medical/medico-legal purposes, provided

my identity is not revealed by such acts. I also agree to my clinical details being shared for scientific publications provided my identity is not disclosed.

I am also aware of the expected course after the operation/procedure and the care to be provided, and understand that sometimes admission to an Intensive Care Unit and/or extension of duration of hospitalization may be required and/or there may be requirement of extra medicines or treatments, thereby leading to increase in the treatment expenses, depending upon the body's response to the treatment/procedure.

I authorize the hospital for disposal of any tissue or body part that may be removed from my body in the appropriate manner during and for the purpose of conducting this operation/procedure.

I declare that I have received & fully understood the information provided in this consent form, that I have been given an opportunity to ask questions relating to my ailment, the operation/procedure being performed, its risks, consequences, alternatives, potential complications and intended benefits and recovery, and that all my questions have been answered to my entire satisfaction and there are no misconceptions or false hopes in my mind. I further declare that all fields (of this form) requiring insertion or completion were filled in my presence at the time of my signing this form.

. I am fully aware of the nature, potential risks and complications, intended benefits and possible alternatives.

I, the above named ☐ Patient/ ☐ named patient's representative, do further hereby declare that I am above 18 years of age as on the

	Name	Signature	Date	Time
